

SILVER PACKAGE

The Rowing and Paddling Silver Package is a mid-level solution from Lynx, and contains everything you need to capture brilliant, high-resolution **color** images at the finish line. The Silver Package includes the timer-enabled **EtherLynx PRO** photo finish camera with extended resolution and zoom, which not only captures 2,000 frames per second, but also boasts a vertical resolution of 4,000 pixels – meaning no finish line is too wide to be covered.

Another key feature of this package is the RadioLynx wireless start system. RadioLynx is a great for long rowing events because it allows an accurate start signal to be sent wirelessly, directly from the start location to the finish line.

The Rowing and Paddling Silver Package combines the EtherLynx PRO camera, RadioLynx wireless start, and everything else you need to create the perfect mid-range solution at any level of competition.

COMPONENTS

- **Camera - EtherLynx PRO**, 2000 frames/second, color, timer-enabled, with extended resolution and zoom for image density up to 4,000 pixels
 - Color F-mount(Nikon compatible) through-the-lens alignment viewer and remote iris control
 - Nikon 80-200 mm f/2.8 manual zoom lens
- Super Head Clamp, Geared Mounting Head, and Tripod for precision adjustment
- All-inclusive Camera & Start Cable set with Capture Button and USB-to-Serial Converter
- Extended Range RadioLynx Wireless Start System
- Custom carrying case
- **LynxPad** – Meet management software
- **FinishLynx 32** – Multi-language* photo finish software with RadioLynx plug-in

* See Website for current listing. FinishLynx available in English, Spanish, French, Arabic, German, Italian, Korean, Portuguese (Brazil), Russian, Swedish, Finnish, Chinese (Simp.), Chinese (Trad.), Japanese

SILVER PACKAGE FEATURES

- The EtherLynx PRO camera with extended resolution and zoom boasts a 4,000 pixel vertical density for rich, color images on even the widest river courses.
- The RadioLynx wireless start system promotes operator flexibility by allowing the photo finish start sensor to be wirelessly operated closer to the start.
- The “building block” nature of Lynx packages means that you can buy or trade-in existing components for newer upgrades at any time.

SILVER PACKAGE BENEFITS

The Rowing and Paddling Silver Package is a great system for practically every program because it offers the features and flexibility of a professional system at a very reasonable price. The one enhancement that truly elevates it above the entry-level Bronze solution is the EtherLynx PRO camera with extended resolution and zoom. The PRO camera offers several notable upgrades, including rich color image capture, extended zoom for mounting flexibility, and a 4000-pixel vertical resolution for capturing wide finish lines. According to FISA, the ideal course width for championships and regattas “shall be at least 162 meters” (2005). The PRO not only captures these widths with ease, but also leaves plenty of room for variations in camera height and distance.

THE LYNX SILVER PACKAGE

A second key addition to the Silver Package is the RadioLynx wireless start system (and corresponding FinishLynx plug-in). Just as the EtherLynx PRO adds a huge degree of flexibility for course and event variations, RadioLynx provides more freedom with start/finish line locations and accessories. The wireless start transmitter beams an accurate, real-time signal to the RadioLynx receiver located up to 5 km away at the finish line. This feature can be especially useful when the start of the event takes place on a floating pontoon. Also, as standard rowing and paddling courses are either 500, 1,000, or 2,000 meters in length; the extended range RadioLynx can span an entire course with room to spare.

In addition to the high-resolution color camera and wireless start system, the Silver Package includes all the software, cables, and other features necessary to run the system *out-of-the-box*; all you need is a Windows-based computer to run FinishLynx software. Thanks to the program's open-interface design, FinishLynx is also compatible with hardware, software and databases (like REGATTA MASTER) from a long list of third-party manufacturers. While the Silver Package includes a wealth of powerful photo finish features designed especially for rowing, the endless upgrade opportunities – from scoreboards, to split time generating technologies - make it the perfect long-term investment for any sized club.
