

LED Video Display Options

Datasheet

VDM (Video Display Module)

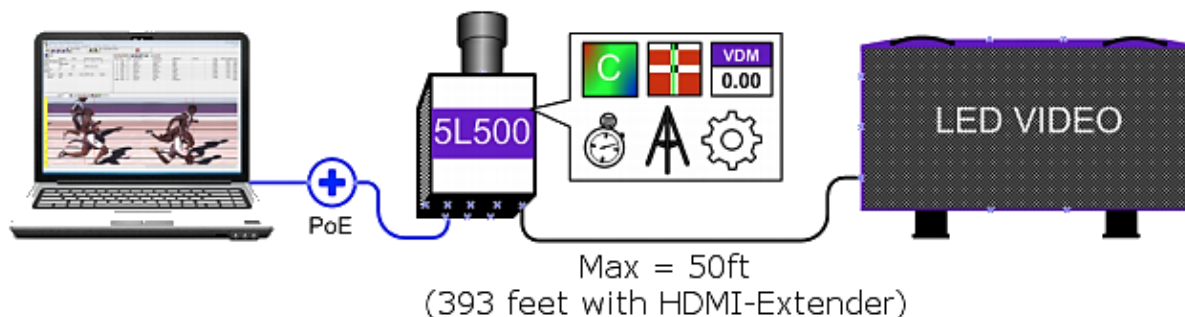

VDM enables the live display of FinishLynx running time, results, and images on a video display connected to the HDMI port of Vision cameras. Simply connect a compatible video display to the camera back and instantly show live results data at the finish line.

Data Source – Limited to Vision/Vision PRO cameras with VDM upgrade.

Connection – HDMI between camera back panel and display.

Resolution – Up to 1600 x 900.

Layout – Design is controlled by selected customizable scoreboard script. No scrolling. Default scripts are included with FinishLynx.

ResultTV

ResultTV is a digital display and graphic generation program that produces live results from FinishLynx timing systems, and can also be used with LynxPad and FieldLynx. The Windows-based software allows FinishLynx operators to produce scalable result graphics for output on any compatible graphic display or scoreboard. The ResultTV software can even produce high-quality dynamic images suitable for live broadcast television or internet video streams.

Data Source – FinishLynx, FieldLynx, LynxPad, ReacTime.

Connection – Wired Ethernet or Wi-Fi to ResultTV PC. HDMI between ResultTV PC and display sending card.

Resolution – Up to the max of the LED Video Display in use (no limitations).

Layout – Full flexibility of layout design in ResultTV software.

LED Video Display Options

Datasheet

ResultTV-VDM

ResultTV-VDM is a simplified version of ResultTV. Like the VDM option for Vision-series cameras, the content of the ResultTV-VDM layout is controlled by the data received using customizable scripts.

Data Source – FinishLynx, FieldLynx, LynxPad, ReacTime.

Connection – Wired Ethernet or Wi-Fi to ResultTV-VDM PC. HDMI between ResultTV-VDM PC and display sending card.

Resolution – Limited to the size of the display purchased with the solution.

Layout – Similar to VDM. Design is controlled by selected scoreboard script. Default scripts are included with FinishLynx, FieldLynx and LynxPad.
